

Porsche 996 Carrera oil light comes on when the engine is warm

Beitrag von „Albert Motorsport“ vom 8. Mai 2026, 11:24

Dear Albert,

My engine is running now beautiful (thanks for the nice cylinder and pistons I got from you), but now the oil light comes on when the engine is warm and idling. I have tried to get more information about this, but I don't think it does any harm in itself; I just find it annoying that it comes on, and it makes driving less relaxed. My question is, is it bad to keep driving with this, and what is the best thing to do to fix it? I know that the oil pump on an M96 is not the best And sometimes the meter can indicate something different than reality.

Thank you for your time and knowledge
