

Porsche 993 Upgrade to 993 Turbo - Some questions

Beitrag von „Albert Motorsport“ vom 17. Juni 2026, 11:13

Dear Mr. Jxxx,

Thank you for your inquiry.

The answer depends on your goals, budget, and whether originality is important to you.

If you are looking for the best performance-to-cost ratio and already own a well-maintained 993 Carrera, a turbo conversion can be a very exciting project. However, a proper 993 Turbo conversion requires much more than simply adding turbochargers. The engine internals, fuel system, engine management, cooling, exhaust system, transmission, brakes, and suspension should all be considered to achieve reliable performance.

On the other hand, if you are aiming for factory-engineered performance, collectability, and long-term value retention, purchasing an original Porsche 993 Turbo is usually the better investment. The factory Turbo offers exceptional engineering, reliability, and market value that is difficult to replicate with a converted vehicle.

To provide a more accurate recommendation, please let us know:

- Current model (993 Carrera 2, Carrera 4, etc.)
- Vehicle mileage
- Intended use (road, track, or both)
- Desired power output
- Approximate budget

Once we have this information, we can advise whether an upgrade or a move to an original 993 Turbo would be the better solution for you.

We look forward to hearing from you.

Best regards,

Jürgen Albert
