High performance clutch for Porsche 997 - 991 GT3 Cup racer

Beitrag von „Albert Motorsport“ vom 15. April 2022, 20:11

Dear friends,

For many years in active racing, we have a very well-proven clutch in use, which is very reasonably priced, in our program!

This clutch costs only about half of a Porsche 991 Cup clutch, but can transmit higher torques of up to 750 Nm, is lighter and has a much higher Service life as the Porsche 991 Cup series clutch.

The clutch is also characterized by a much lower heat sensitivity in comparison to the series cup clutch! Since using these clutches in our race cars, we had no problems with heat problems at the clutch more!

On the third photo you can see the difference between the original Porsche clutch (right) and our clutch (left).

Also, individual parts (discs) are available on demand at short notice from us.
