> **More than 80 percent All-electric Vehicles by 2030**
>
> Over the past financial year, Porsche AG has underpinned its position as one of the world’s most profitable automobile manufacturers. The Stuttgart-based sports car manufacturer reached a new all-time high in both sales revenue and operating profit.

> Last year, almost 40 percent of all new Porsche vehicles delivered in Europe were already at least partly electric – i.e. plug-in hybrids or fully electric models.
>
> In addition, Porsche had announced its intention to be carbon-neutral on the balance sheet in 2030. “In 2025, half of all new Porsche sales are expected to come from the sale of electric vehicles – i.e. all-electric or plug-in hybrid,” announced Oliver Blume. “In 2030, the share of all new vehicles with an all-electric drive should be more than 80 percent.”
>
> To achieve these ambitious goals, Porsche is investing in premium charging stations together with partners – and additionally in its own charging infrastructure. Further extensive investments are flowing into core technologies such as battery systems and module production. In the newly founded Cellforce Group, high-performance battery cells are being developed and produced that are expected to be ready for series production by 2024.
>
> In 2021, Porsche delivered 301,915 vehicles to customers worldwide. This means that the 300,000 mark was exceeded for the first time in the company’s history (previous year: 272,162 deliveries). The bestselling models were the Macan (88,362) and the Cayenne (83,071). Delivery figures for the Taycan more than doubled: 41,296 customers took delivery of the first all-electric Porsche. This even overtook the iconic 911 sports car, although the latter also set a new record with 38,464 units.
>
> “The Taycan is 100 percent a Porsche and inspires all kinds of people – existing and new customers, experts and the trade media. We are stepping up our electric offensive with another model: **By the middle of the decade, we want to offer our mid-engine 718 sports car exclusively in an all-electric form,**” Said Oliver Blume.
